Combat Rules (misc.)

Surprise – contested roll
Stealth or Ambush + Finesse vs. targets Wits + Ambush
If target does not have Ambush – is straight Trait roll
If surprised, PD drops to TN of 5
If surprised, cannot use any Actions for remainder of the Phase

Lying Prone – your PD is TN of 5
You must make 2 raises to use an Active Def
It takes 1 Action to stand up
During the Phase you stand up, your PD is 5 and you cannot use any Active Def

Contested Rolls – TN = opposed Trait x5
Both acting and opposing characters roll
One of 3 things will happen:

1. only one char makes his roll – he succeeds/opponent fails
2. both make their rolls – the one who rolls higher margin wins
3. both miss, the Action until one or both make their roll

Off Hand – -1 unkept die penalty
If you took the Left-handed advantage, this applies to your right hand
Some swordsman's schools teach you how to avoid this penalty

Movement – it takes an Action to go up 1 level
You can move anywhere on the same level or 1 level down with no penalty
If you descend more than 1 level you take falling damage of 1k1 per level difference
If you have Break Fall, subtract 1k1 from the falling damage for each point you have in Break Fall

Falling Damage – you take 1 die of damage for every 10' or each level you fall up to 200'
How this translates into Dramatic Wounds depends on what you land on
Soft surfaces, ie. haystack, water, horse or another person, negate all damage from a fall

Firm surfaces, ie. ground or gravel, inflict 1 Dramatic Wound for every 20 damage Wound Check is failed by
Hard surfaces, ie. stone or metal, inflicts 1 Dramatic Wound for every 10 damage Wound Check is failed by

Fear - contested roll against creature's/person's Fear Rating
Roll Resolve against a TN of Fear Rating x 5
Those who fail lose a number of unkept die from each roll equal to the Fear rating while facing the creature/person

Rolling more - Than 10 dice
if rolling more than 10 dice, convert the extra into Kept Dice - ie. 12k6 would convert to 10k8
Should you ever reach 10k10 and still have extra dice, each addt'l dice becomes a bonus of 10 - ie 15k10 would be 10k10+50 and 11k11 would be 10k10+20
